03 OUR SOLUTION

04 MAIN FEATURES

05 WORKFLOW

06 BUSINESS MODEL

PROBLEM STATEMENT

Loss of Organizational Knowledge

Critical business knowledge is often lost when employees leave the company or when discussions are forgotten over time

Missing Decision Context

Existing AI meeting assistants can help to summarize what was discussed, but they rarely capture why decisions were made

Reduced Productivity

Employees spend significant time searching through recordings, meeting documents or asking colleagues about previous decisions

PROBLEM STATEMENT

**70% Visual
Ideas Lost**

**Audio tools miss
whiteboard
sketches and slide
dynamics**

WHY OUR PRODUCT BETTER FROM OTHERS

Limitations (Otter / Fireflies)

- Static & Isolated Files: Generates standalone transcripts and PDFs. Valuable knowledge remains trapped and siloed.
- Missing the "Why": Transcribes what was discussed but completely fails to map the reasoning behind business decisions.
- Reactive & Single-Mode: Only processes audio after the fact. Ignores crucial visual data from presentation slides and whiteboards.
- No True Accountability: Creates generic action lists that are quickly forgotten once the meeting window closes.

The Corporate Brain Advantage

- Living Knowledge Graph: Intelligently connects meetings, projects, decisions, and people into a unified, searchable corporate memory.
- Decision Intelligence: Reconstructs exact decision histories, showing leaders exactly why a specific choice was made months ago.
- Proactive Multimodal AI: Analyzes shared screens and proactively flags policy risks or duplicate discussions in real time.
- Personalized Dashboards: Automatically syncs commitments to personalized workspaces and external tools (Jira, Asana).

OUR SOLUTION: CORPORATE BRAIN

BEFORE MEETING

- Gathers **relevant organizational knowledge**
- Previous related meetings
- Historical decisions
- Specific action items
- Relevant documents and project updates
- Unresolved issues

DURING MEETING

- Join as an **AI participant**
- Captures speech with speaker attribution
- Detect key decisions, action items, deadlines and commitments
- Raising intelligent AI Flags when:
 - Policy or compliance conflicts
 - Potential project risks

AFTER MEETING

- Playback interpret whiteboard sketches
- Builds the **Corporate Memory Graph**
- Connecting related meetings and decision tracing
- Personalized action dashboards for every participant
- **Update organizational knowledge automatically**

PRE-MEETING

Pre-meeting Brief

Automatically generate a one-pager including summary of previous meeting with similar topic, status of open action items and suggested agenda

Conflict Detection

Flag if the proposed agenda or topics conflict with previous decisions, active policies, or ongoing projects.

Participant Background Snapshot

For new joiners, provide a quick overview of other attendees' roles, expertise, and past contribution patterns.

DURING MEETING

Real-time Decision Support

When a decision point arises, surface past relevant discussions, evidence, and final decisions from the knowledge graph.

Web Search & Benchmarking

Simultaneously search the web for similar decisions, industry best practices, or competitor case studies to inform the current discussion.

Late Joiner Summary

Provide a 30-second summary of what has been discussed so far for anyone joining late.

Risk/Disagreement Flagging

Automatically highlight moments of disagreement, unresolved issues, or potential policy violations in real time.

AFTER MEETING

Individual Task Dashboard

Personalised view of each participant's commitments, deadlines, dependencies, and supporting documents.

Automated Task Creation

Push action items directly into project management tools like Jira, Asana, or Linear, with assignment and due dates.

Knowledge Graph Visualisation

Provide an interactive graph view let users explore connections.

Impact Analysis

Show which projects, teams, or policies are affected by decisions made in the meeting.

Cross-Meeting Trends

Analyse multiple meetings over time: recurring topics, frequently delayed tasks, reversed decisions, or low-engagement patterns.

Chat with Meetings

Allow users to ask natural-language questions like "What were the key objections to Project X in the last quarter?" and get answers with citations.

WORKFLOW

Stage 1: Meeting Layer

API involved: Google Meet API, MS Teams SDK, Zoom SDK

- Authorization: agent is authenticated via the meeting platform's API (OAuth).
- Joining: The agent automatically joins scheduled meetings based on calendar integration.
- Stream Ingestion: The API pipes raw audio streams in real-time to ingestion server.

zoom

Stage 2: Speech-to-Text Layer

API involved: OpenAI Whisper (or similar ASR models)

- Preprocessing: Raw audio chunks are streamed to the Whisper model.
- Transcription: Whisper converts speech to text, identifying the speaker and adding timestamps.
- Sanitization: The text is cleaned of filler words and formatted into a structured, readable transcript.

Stage 3: LLM Layer

API involved: Gemini 3.6 Flash, Claude Sonnet 5 or DeepSeek v4 Pro

- Semantic Analysis: The LLM receives the transcript and metadata
- Entity Extraction: The LLM identifies key entities such as decisions, action items, risks, people, and topics.
- Reasoning: The LLM analyzes the context behind these entities

WORKFLOW

Stage 4: Knowledge Layer

API involved: Neo 4j

- Node/Edge Creation: The extracted data is mapped into the graph.
- Nodes: Person, Meeting, Decision, Project, Document, Action Item.
- Edges: Relation / Causation
- Relational Linking: The graph connects new information to existing nodes from past meetings

Stage 5: User-Facing Layer

Tools involved: FastAPI (Backend) + React (Frontend)

- Query Handling: The backend sends a query to the Neo4j database using Cypher query language and the LLM.
- Contextual Synthesis: The system retrieves the relevant graph nodes and uses the LLM to generate a natural-language answer, citing the historical context stored in the graph.

WHY CORPORATE BRAIN?

TARGET AUDIENCE

- **Employees**
- **Project Managers**
- **Enterprise Executives**

REAL-WORLD IMPACT

- **Transparent Decision Traceability**
- **Accelerated Employee Onboarding**
- **Policy Compliance & Risk Control**

BUSINESS MODEL

OUR TARGET CUSTOMERS:

- Primary Market: Large enterprises with significant knowledge management needs, such as banks, consulting firms, tech companies, and government agencies.
- Secondary Market: Growing medium-sized businesses (SMEs) facing project management challenges.

FOUR CORE REVENUE STREAMS:

SaaS Subscriptions (Primary): Recurring revenue based on the number of users.

Enterprise Licensing: Annual contracts for organizations requiring private cloud, on-premises deployment, and strict compliance support.

API & Integration Marketplace: Fees for premium integrations with enterprise tools like SAP, Salesforce, and ServiceNow.

Professional Services: Additional revenue from system setup, data migration, and custom AI training for large clients.

PRIMARY REVENUE STREAM

- The SaaS model is designed with a clear upgrade path.

PLAN	TARGET CUSTOMERS	Core Features & Value Proposition
Starter	Growing SMEs	Basic meeting capture, AI transcription, and automated meeting summaries.
Professional	Mid-Market	Unlocks the Corporate Memory Graph, AI Context Flags, and Personalized Task Dashboards.
Enterprise	Large Orgs	Advanced decision intelligence, cross-department analytics, API access, SSO, and strict compliance governance.

COMPETITIVE ADVANTAGE

Corporate Brain does not compete on price with commodity transcription tools like Otter.ai or Fireflies.ai. It is positioned and sold as an Enterprise Intelligence Platform.

WHY OUR PRODUCT?

- Accelerate onboarding for new employees
- Improve accountability with personalized task tracking
- Support compliance through traceable decision histories
- Reduce repeated meetings by providing historical context
- Enable faster and more informed executive decision-making

CORPORATE BRAIN

FUTURE EXPANSION

Once the platform builds a company's initial knowledge graph, it creates high customer retention by expanding into AI project management, onboarding, and compliance audit

THANK YOU

Corporate Brain
